

# AVEELASH HOTA

## DEVOPS ENGINEER

+91-9022475448 | [aveelash.hota04@gmail.com](mailto:aveelash.hota04@gmail.com) | [github.com/Aveelash](https://github.com/Aveelash)

### SUMMARY

DevOps Engineer with hands-on experience in Kubernetes, AWS, and CI/CD. Skilled in building automated deployments, containerized applications, and scalable cloud systems.

### EDUCATION

Bachelor of Science in Cloud Computing and Automation      Expected Graduation, May 2026  
Vellore Institute of Technology

### SKILLS

**Cloud:** AWS (EKS, ECS, Lambda, VPC, S3, RDS, DynamoDB, Route53, Fargate, IAM, KMS)  
**DevOps & Automation:** Kubernetes, Docker, Helm, Terraform, Ansible, CloudFormation, Jenkins  
**CI/CD & GitOps:** GitHub Actions, Argo CD, AWS CodePipeline (Build, Deploy, Commit)  
**Observability & Security:** Prometheus, Grafana, CloudWatch, Trivy, SonarQube, WAF  
**Databases:** PostgreSQL, MongoDB  
**Messaging & Cache:** Redis, Kafka  
**Languages:** Python, Shell Scripting (Bash), JavaScript

### WORK EXPERIENCE

**DevOps Intern | Jan 2026 – Present**

**Itomata Software Product and Services LLP – Pune, Maharashtra**

**Github | [https://github.com/aveelash/itomata\\_cicd\\_project](https://github.com/aveelash/itomata_cicd_project)**

- Built CI/CD pipelines using AWS CodePipeline and Terraform for EKS provisioning, reducing manual deployment effort and enabling faster and more consistent releases.
- Deployed containerized applications on Kubernetes with HPA and Liveness/Readiness probes for better reliability.
- Implemented Blue-Green deployment strategy using Argo CD and developed a basic AI-based monitoring tool for pod issue detection and recovery.

### PROJECTS

**Kubernetes DevSecOps Pipeline**

**Github | [https://github.com/aveelash/DevSecOps\\_Project](https://github.com/aveelash/DevSecOps_Project)**

- Built a DevSecOps CI/CD pipeline using GitHub Actions, integrating SonarQube and Trivy for automated security checks and vulnerability scanning.
- Deployed containerized applications on Kubernetes using Argo CD and Helm for reliable and seamless updates.

**End-to-End DevOps Implementation for Golang Web Application**

**Github | <https://github.com/aveelash/devops-go-web-app>**

- Built a CI/CD pipeline for a Golang application using GitHub Actions, automating testing and Docker image build & push workflows.
- Deployed containerized application on Kubernetes using Argo CD and Helm for reliable and seamless updates.

### CERTIFICATION

**AWS Solution Architect – Associate | April 2025**
